

20 ROBERT SONG: [I may be the first Chinese speaker.
21 I moved to Las Vegas eight years. Suddenly why now have
22 Yucca Mountain here? I work for nuclear power plant in the
23 energy industry for 25 years. I've been to Washington,
24 Hanford. I've been Colorado to clean up the junk.
25 I've been Savannah in South Carolina. I've
1 been consultant for Department of Energy. And I against
2 Yucca Mountain. We need to stop it. Yeah. Because
3 it's going to create a big problem in Las Vegas. The
4 first one, we need our life. We need for our children.
5 We need for our grandchildren.
6 This is very important. I don't want to see
7 my grandchildren drive a car next to a truck that have
8 radiation with material here. It is high-level waste.
9 There can be half-life for a thousand years. It's
10 damaging. We can be damaged by penetration. We can
11 damaged by eat something. We can be damaged by the
12 breathing.
13 And that nuclear radiation just goes through
14 the air, goes through the ground, goes through the
15 water. Even Test Site almost damage our groundwater.
16 You know, the groundwater in Pahrump and the Test Site,
17 it's a number three largest water source in the whole
18 world.
19 We cannot damage for that. We need to stop
20 this project immediately. Besides that, yes. That's
21 because so many speak, so many as have already. So I
22 just in short hope we can stop here.] Thank you.
